DETAILED ACTION

The amendment filed on 09 August 2007 has been entered and overcomes the rejections to the claims.

Allowable Subject Matter

1. The indicated allowability of claims 79-85 is withdrawn in view of the newly discovered reference(s) to Jones et al. Rejections based on the newly cited reference(s) follow.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Regarding claim 79, Jones ('033) teaches in figure 1 and the corresponding text, a top emitting OLED display, comprising: a) a substrate (100); b) a patterned electrode (200) formed above the substrate, defining a plurality of light emitting elements having gaps between the light emitting elements; c) a layer of OLED (300) material disposed above the patterned electrode; d) a continuous transparent electrode (510) disposed above the layer of OLED material; and e) a light-absorbing auxiliary electrode (520) that

is thermally and electrically conductive and in electrical and thermal contact with the continuous transparent electrode and located over the gaps between the light emitting elements of the display.

Regarding claim 80, Jones ('033) teaches the display is an active matrix display.

Regarding claim 81, Jones ('033) teaches the auxiliary electrode is located above the transparent electrode.

Regarding claim 82, Jones ('033) teaches the auxiliary electrode comprises a uniform light-absorbing material that is thermally and electrically conductive.

Regarding claim 83, Jones ('033) teaches the auxiliary electrode comprises a thermally and electrically conductive material and a thermally conductive light-absorbing layer.

Regarding claim 84, Jones ('033) teaches the auxiliary electrode comprises light absorbing silver.

Regarding claim 85, Jones ('033) teaches display claimed in claim 83, wherein the thermally and electrically conductive material is comprised of aluminum.
